

Finding a particular solution.

$$F'(x) = \frac{1}{x^2} \quad F(1) = 0$$

A ball is thrown upward with an initial velocity of 60 fps from an initial height of 100ft. Find the position function giving the height, s , as a function of time, t . When does the ball hit the ground?

A ball is thrown upward with an initial velocity of 60 fps from an initial height of 100ft. Find the position function giving the height, s , as a function of time, t . When does the ball hit the ground? (Assume -32fps for gravity)
